

Aniket Karpe

Senior Software Engineer | Cloud DevOps Engineer & Developer

Summary

DevOps and Full-Stack Engineer with 3 years of experience in designing scalable cloud infrastructure, building CI/CD pipelines, and developing full-stack applications. Experienced in AWS, Kubernetes, and Terraform with strong focus on automation, reliability, security and cost optimization using agile methodologies.

Address

Mahape, Mumbai, Maharashtra, 400710

EDUCATION

B.E. Computer Engineering | 2023
Amrutvahini College of Engineering
Sangamner | CGPA 8.66

SKILLS

- **Development:** React JS, Node JS, Flask, Next JS, MongoDB, MySQL

- **DevOps and Cloud:** AWS, Azure, Kubernetes, Ansible, SaltStack, Terraform, CloudFormation, Docker, Podman

- **DevOps & Automation:** Git, CI/CD, GitHub, Azure DevOps, Jenkins, Git Labs, AWS Code Pipelines

- **Monitoring and Security:** Datadog, Prometheus, Grafana, Snyk, Trivy, Sonarqube

- **Languages:** Python (Basic), Shell Scripting, SQL, C, C++

- **Operating Systems:** Linux, Windows

CERTIFICATION

- AWS Certified DevOps Engineer Professional

EXPERIENCE

PibyThree Consulting Services Pvt. Ltd. [Oct 2023 – Current]

[Senior Software Engineer] [Jan 2026 – Current]

Driving platform-level improvements in **DevOps practices** with a focus on cloud **security, governance, and reliability** across multi-cloud environments. Leading development of solutions for Kubernetes security, policy enforcement, and advanced cost governance, while guiding teams in implementing secure, scalable deployment and monitoring standards.

[Analyst Software Engineer] [Jan 2025 – Dec2025]

Developed a **FinOps** application to analyze the costs of multi-cloud services (AWS, Azure) using **Flask** for the backend and **React.js** for the frontend. Automated deployment of internal web applications using **Docker** and **EC2**, streamlining development workflows with enhanced security and end-to-end monitoring, and automated infrastructure using IaC tools (**Terraform, Pulumi**).

[Associate Software Engineer] [Oct 2023 – Dec 2024]

Administer and manage **Dataiku** deployed on **AWS**, including **EKS clusters** and associated nodes, ensuring high availability and scalability. Developed a UI-based application for deploying **Docker** images to **Kubernetes** clusters (EKS, Minikube, OpenShift) with deployment strategies like blue-green and others.

PROJECTS

Kubernetes Deployment Application

Developed a UI-based **Kubernetes** deployment application using **React** and **Node.js** to deploy containerized applications across multiple environments. The application supports **AWS EKS, OpenShift, and Minikube**, with automated Kubernetes **YAML** generation to simplify deployment workflows. **CI/CD** automation was implemented along with advanced deployment strategies such as Rolling and Blue-Green deployments to ensure reliable releases **Impact:** Reduced manual deployment effort and improved deployment consistency across environments.

FinOps Application

Built a cloud cost monitoring application using React and Flask to analyze and visualize **AWS** cloud spending. Integrated **AWS cost management APIs** with tag-based cost filtering and interactive dashboards for better cost visibility. The application was **containerized** and deployed on **EC2**, enabling scalable and consistent deployments. **Impact:** Improved visibility into cloud costs and enabled data-driven cost optimization decisions.
